

# SCALABROS S.R.L.

## SNEEZE SHIELD

Our product, is composed of three pieces: a transparent panel (made of PMMA) and two support feet. It provides a protective barrier during face-to-face interactions  
It is available with or without central opening, which could work as a pass-through slot for most documents.

### Installation

Remove the protective film from both sides.

In order to remove the film, it is sufficient to start from a corner (FIG.1), lifting it up with your fingers, without using tools, such as screwdriver, cutter, keys, etc. During this process, be careful not to hit the panel against sharp edges, which could scratch it irreparably.

Proceed with the installation of the support feet, which are the same, inserting the hooks into the holes of the foot. (FIG. 2 e 3). The insertion can be considered correct, if the hooks protrude from the opposite side of the foot.

Once the foot is pushed completely against the panel, push the panel down (FIG. 4), in order to match the inferior sections of the parts (FIG. 5).

### TECHNICAL CHARACTERISTICS

MODELS	L [cm]	A [cm]	P [cm]	B [cm]	C [cm]
Protection 65x75	65	75	25	39	21
Protection 75x65	75	65	25	39	21
Protection 100x75	100	75	25	39	21
Protection 100x100	100	100	25	39	21
